

WOMEN

IN STEEL

CORPORATE BROCHURE

Why **BBD Steel?**

Add tangible value and provide quality steel products and solutions that are accessible at competitive prices. That has been our stimulus since 2014. Our organization focuses on the business of providing and supplying sustainable steel & steel products.

We are a women owned entity hence our name BBD Steel derived from Basadi Ba Ditshipi which means women of Steel in Setswana. In our fairly young history in the Steel industry we have come to understand our customers and their various product and solutions expectations.

Our combined experience, passion, intuitive nurturing qualities and exceptional staff compliment help us to provide all our customers with the best customer experience.

Our vision is to be the leading women owned steel merchant of choice. We've been building purposeful and strong partnerships with industry leaders, suppliers, customers and industry associations across the steel industry. These affiliations lead to better insights, deeper collaboration and the trust needed to navigate the ever-shifting steel landscape. Our positioning statement Built on Lasting relationships is the core of our unique business proposition and drives all our engagements, processes and operations.

At BBD Steel, we believe in business as usual, this allows our clients, business partners and other stakeholders to tackle the sum and substance of their line of work as we make certain that every other wheel of their specific steel supply and delivery needs are moving seamlessly.

Thank you for choosing to partner with us.

Monika & Gwen

Delivery

We understand the importance of on time delivery | We deliver locally and nationally

We are agile through a hands-on approach and a fleet of vehicles with various payloads and configurations ranging between 1 and 34 tons.

Procurement Services

We source directly from local and international primary steel producers to ensure best quality and price to our customers.

Processing Capacity

- All Hot Rolled Coil from 3mm up to 12mm in thickness and maximum 1500mm width are de-coiled on a stretcher leveller. This vastly improves the quality of the product offering with a potential scrap reduction of up to 15%.
- De-coiling and cut to length for hot rolled, cold rolled and galvanised material.
- Slitting
- Guillotining
- Blanking
- Laser
- Plasma
- Bending
- Tube Laser
